

## A - General description

**Programme Title** – Computer Engineering (AKA Computer Science, AKA IS/IT Engineering).

**Qualification awarded** – BSc, 1st cycle of Bologna Process (*Licenciatura*) (180 ECTS credits)

**Admission requirements** – 12th grade national exam on Mathematics, or Physics, or Descriptive Geometry; alternatively, special admission procedures for candidates older than 23; alternatively, special admission procedures for candidates holding a specific or recognized professional course of technological specialized studies.

**Educational and Professional goals** – Deliver engineers with professional skills in ICT (Information and Communication Technologies) particularly in Software Development, Specification, Installation and Management of Computer-based Systems, Information Systems Management and ICT Projects, in general.

**Access to further studies** – Any graduate can apply to Master Programs (2nd cycle of Bologna Process), offered by other colleges, in similar or related areas.

**Course structure diagram with credits (60 per year)** – 30 ECTS credits throughout 6 semesters (3 years):

Course Title	Year	Semester	Number of credits
Mathematical Analysis I	1	1	6
Álgebra	1	1	6
Introduction to Computer Programming	1	1	6
Digital Systems	1	1	6
Introduction to Technology	1	1	6
Mathematical Analysis II	1	2	6
Logic and Computing	1	2	6
Introduction to Digital Electronics	1	2	6
Object-Oriented Programming	1	2	6
Internet Technology I	1	2	6
Probability and Statistics	2	1	6
Data Structures and Algorithms	2	1	6

<b>Introduction to Telecommunications</b>	2	1	6
<b>Computer Architecture I</b>	2	1	6
<b>Databases I</b>	2	1	6
<b>Operating Systems</b>	2	2	6
<b>Computer Data Networks I</b>	2	2	6
<b>Databases II</b>	2	2	6
<b>Microprocessors</b>	2	2	6
<b>Internet Technology II</b>	2	2	6
<b>Systems Analysis</b>	3	1	6
<b>Computer Data Networks II</b>	3	1	6
<b>Computer Architecture II</b>	3	1	6
<b>Management and Security of Computer Networks</b>	3	1	6
<b>Distributed Systems</b>	3	1	6
<b>Entrepreneurship</b>	3	2	6
<b>Information Systems on Organizations</b>	3	2	6
<b>Networking Project</b>	3	2	6
<b>Information Systems Project</b>	3	2	6
<b>Final Project</b>	3	2	6

**Final examination, if any** – none

**Examination and assessment regulations** – specific rules for each course.

**ECTS departmental co-ordinator** – Prof. José M. P. R. Ramos

## B - Description of individual course units

<b>Course title</b>	Mathematical Analysis I
<b>Course code</b>	91191
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	I
<b>Year of study</b>	First
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Luís Merca, Manuela Fernandes, Cristina Costa
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<ol style="list-style-type: none"> <li>1- To give the basic concepts and mathematical methods usually used in this engineering bachelor.</li> <li>2- To provide students, skills to work with differential and integral calculus in functions of one real variable.</li> </ol>
<b>Prerequisites</b>	NA
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1- Preliminaries.</li> <li>2- Real functions of a real variable.</li> <li>3- Limits and continuity.</li> <li>4- Differential calculus</li> <li>5- Integral calculus.</li> </ol>
<b>Recommended reading</b>	<p>Texts and support material available in the course webpage.</p> <p>Jaime Carvalho e Silva; "Princípios de Análise Matemática Aplicada". Mc Graw-Hill.</p> <p>Swokowski, E. W.; "Cálculo com Geometria Analítica". Mc Graw-Hill.</p> <p>Piskounov, N.; "Cálculo Diferencial e Integral". Edições Lopes da Silva, Porto.</p> <p>Simmons, G. F.; "Cálculo com Geometria Analítica". Mc Graw-Hill.</p> <p>Anton, Howard; "Cálculo um novo horizonte. Volume I". Bookman.</p> <p>Stewart, James; "Cálculo. Volume I". Pioneira.</p> <p>Larson, Ron; "Cálculo. Volume I". 8ª Edição. McGraw Hill.</p>
<b>Teaching methods</b>	Theoretical lectures, with presentation and exemplification of the proposed subjects. Theoretical-practical lectures to propose and solve exercises.
<b>Assessment methods</b>	<p>Continuous assessment: two written tests.</p> <p>Exam assessment: one written test.</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Algebra
<b>Course code</b>	91192
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Carlos Perquilhas; Pedro Carrasqueira
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To provide insight on Matrix Linear Algebra, placing special emphasis on the discussion and the exact and approximate computation of the solution of linear systems of equations. Furthermore, Vector Spaces, Determinants and Matrix Eigenvectors and Eigenvectors are studied. These are topics of utmost interest in many Engineering applications.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<ul style="list-style-type: none"> <li>1 - Complex numbers</li> <li>2 - Matrices and systems of linear equations.</li> <li>3 - Vector spaces.</li> <li>4 - Determinants.</li> <li>5 - Eigenvalues and eigenvectors of square matrices.</li> </ul>
<b>Recommended reading</b>	<p>Lecture notes available at the IPT <i>e-learning</i> platform.</p> <p>F. Dias Agudo, Introdução à Álgebra Linear e Geometria Analítica, Escolar Editora, Lisboa, 1978.</p> <p>E. Giraldes, P. Smith, Curso de Álgebra Linear e Geometria Analítica, Mcgraw-Hill, Lisboa, 1995.</p> <p>L. T. Magalhães, Álgebra Linear como Introdução à Matemática Aplicada, Texto Editora, 1989.</p> <p>W. Nicholson, Linear Algebra with Applications, PWS Publishing Company, Boston, 1995.</p> <p>M. Heath, Scientific Computing: an Introductory Survey, McGraw-Hill, 2007.</p> <p>R. Burden e J. Faires, Numerical Analysis, John Wiley &amp; Sons, 1993.</p>
<b>Teaching methods</b>	Theoretical and theoretical-practical lectures, with presentation and exemplification of the proposed subjects.
<b>Assessment methods</b>	<p>Continuous assessment: two written tests and a computational work, developed with the software Maple.</p> <p>Exam assessment: one written test.</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Introduction to Computer Programming
<b>Course code</b>	91193
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Luís Oliveira
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<p>Solving problems using algorithms.</p> <p>Using a programming language to express an algorithm.</p> <p>Using 'C' programming language to construct a computer program.</p>
<b>Prerequisites</b>	NA
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1- Introduction to Computers and Programming.</li> <li>2- Introduction to Algorithms and programming languages.</li> <li>3- Data processing and manipulation.</li> <li>4- Control flow: Statements and blocks; IF-Else; Switch; While; For; Do.</li> <li>5- Functions and program Structure.</li> <li>6- Pointers and arrays.</li> <li>7- Structures.</li> <li>8- Dynamic memory allocation.</li> <li>9- Files: input and output.</li> </ol>
<b>Recommended reading</b>	<p>"C Programming Language", Ritchie and Kernighan, Prentice Hall, May 1, 1990, ISBN 978-0131108592</p> <p>"Linguagem C", Luís Damas. FCA, 1999</p>
<b>Teaching methods</b>	<p>Lectures: Oral exposition.</p> <p>Laboratory sessions: Laboratorial classes with practical experiments.</p>
<b>Assessment methods</b>	<p>Practice (40%):</p> <p>Assignments and homework.</p> <p>Reports and presentations.</p> <p>Theory (60%):</p> <p>Exam assessment</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Digital Systems
<b>Course code</b>	91124
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Manuel Barros
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	This course was designed as an introductory course in digital electronics. It focuses on analytical reasoning and basic digital design using the standard integrated circuits (ICs) that are used in industry today. Basic notions of digital circuit analysis and design synthesis are introduced, supported by modern CAD software.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>1 – Introduction to the laws and postulates of Boolean Algebra.</p> <p>2 – Simplification of logic networks with Karnaugh Maps.</p> <p>3 – Study of logic design with integrated circuit (IC) gates.</p> <p>4 – Numeric system fundamentals.</p> <p>5 – Introduction to combinatorial circuits, mux, demux, decoders.</p> <p>6 – Study of encoders, comparators and arithmetic components.</p> <p>7 – Introduction to sequential logic, flip-flops, counters, RAMs.</p> <p>8 – Synthesis and analysis of digital circuits with CAD software.</p> <p>9 – Study of ICs logic families, properties and main characteristics</p> <p>10–Introduction to Programmable Logic design with HDLs.</p>
<b>Recommended reading</b>	<p>Text and support materials are available in the web page of course unit and the Moodle system.</p> <ol style="list-style-type: none"> <li>1. John Wakerly, <i>Digital Design Principles and Practices</i>, 3<sup>rd</sup> edition, Prentice Hall (2000)</li> <li>2. Cuesta, L. E Padilla, G., <i>Electrónica Digital</i>, Mc Graw Hill</li> <li>3. Nelson, Victor P., Nagle, H. Troy, Carrol, Bill D., e Irwin, J. David., <i>Digital Logic Circuit Analysis and Design</i>, Prentice Hall.</li> </ol>
<b>Teaching methods</b>	Theoretical classes in which digital system design methods and techniques will be described and demonstrated and practical laboratory classes involving application of the concepts learned.
<b>Assessment methods</b>	Written test during regular examination period and practical works carried out during the laboratory classes (7 practical works approx.)
<b>Language of instruction</b>	Portuguese.

## B - Description of individual course units

<b>Course title</b>	Introduction to Technology
<b>Course code</b>	91195
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	José Ramos; Jorge Mascarenhas.
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To understand the main topics of digital image processing (2D); To perform solid modelling (3D) practices at an elementary level; To adopt fundamental ICT terminology at all communication and argumentation levels; To perform basic research on ICT subjects;
<b>Prerequisites</b>	NA
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1. Digital Image Processing (2D);</li> <li>2. 3D CAD (Computer-Aided Design) practice: solid primitives, CSG (constructive solid geometry), B-Rep (boundary representation) and scenario rendering.</li> <li>3. Solid Modelling Practice;</li> <li>4. The Socio-Technical Dimensions of the Informatics Engineer: ICT (Information and Communication Technology) Professional Skills;</li> <li>5. Computing and Internet History: Computing Generations, Moore Law; Computing Architectures; Architectures of Networks and Supported Services; Internet Services; The World Wide Web; Web 1.0 and Web 2.0;</li> <li>6. Information and Knowledge Management: research and interpersonal communication;</li> <li>7. Computer Systems Concepts for Information in Organizations: devices and services, back-office and front-office, e-Commerce and e-Business;</li> </ol>
<b>Recommended reading</b>	Digital resources supplied by lecturers
<b>Teaching methods</b>	Solid modelling practice in computer 3D laboratory and presentations of ICT topics and subjects
<b>Assessment methods</b>	Practical works assessment
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Mathematical Analysis II
<b>Course code</b>	91196
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	II
<b>Year of study</b>	First
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Carlos Perquilhas, Luís Merca, Manuela Fernandes
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<ol style="list-style-type: none"> <li>1- To provide the basic concepts and mathematical methods usually used in this engineering course.</li> <li>2- To provide the students with skills to work with differential and integral calculus in functions of several real variables.</li> </ol>
<b>Prerequisites</b>	NA
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1- Numerical and Functions Series.</li> <li>2- Real functions of several real variables.</li> <li>3- Multiple Integrals.</li> </ol>
<b>Recommended reading</b>	<p>Texts and support material available in the course webpage.</p> <p>Jaime Carvalho e Silva; "Princípios de Análise Matemática Aplicada". Mc Graw-Hill.</p> <p>Swokowski, E. W.; "Cálculo com Geometria Analítica". Mc Graw-Hill.</p> <p>Piskounov, N.; "Cálculo Diferencial e Integral". Edições Lopes da Silva, Porto.</p> <p>Simmons, G. F.; "Cálculo com Geometria Analítica". Mc Graw-Hill.</p> <p>Anton, Howard; "Cálculo um novo horizonte. Volume II". Bookman.</p> <p>Stewart, James; "Cálculo. Volume II". Pioneira.</p> <p>Larson, Ron; "Cálculo. Volume II". 8ª Edição. McGraw Hill.</p> <p>Zill D., Cullen M.; "Advanced Engineering Mathematics". PWS</p> <p>Azenha A., Jerónimo M., "Cálculo Diferencial e Integral em <math>\mathbb{R}</math> e <math>\mathbb{R}^n</math>". Mac Graw-Hill.</p>
<b>Teaching methods</b>	Theoretical lectures, with presentation and exemplification of the proposed subjects. Theoretical-practical lectures to propose and solve exercises.
<b>Assessment methods</b>	<p>Continuous assessment: two written tests.</p> <p>Exam assessment: one written test.</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Logic and Computing
<b>Course code</b>	91197
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	João Patrício
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To provide insight on the main concepts of Logics, Set Theory, Graphs and Numerical Methods - topics that are essential in areas such as Networks, System Analysis and Formal Verification.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>1 –Logic and Set Theory fundamentals</p> <p>2 – Graphs and diagraphs. Application to Trees and Minimum Cost Path problems.</p> <p>3 – Nonlinear equations and Systems of Nonlinear Equations</p> <p>4 – Polynomial Interpolation</p> <p>5 – Numerical Integration</p> <p>6 – Numerical Methods for Ordinary First Order Differential Equations</p>
<b>Recommended reading</b>	<p>Lecture notes available at the IPT <i>e-learning</i> platform.</p> <ul style="list-style-type: none"> <li>• K. Rosen, Discrete Mathematics and its Applications, Mc Graw–Hill, 1995</li> <li>• Burden R., Faires J., "Numerical Analysis". PWS Publishing Company (1993)</li> </ul>
<b>Teaching methods</b>	Theoretical and theoretical-practical classes, with presentation and exemplification of the proposed subjects, as well as laboratorial sessions for computer implementation and analysis.
<b>Assessment methods</b>	<p>Continuous assessment: two written tests and computational projects.</p> <p>Exam assessment: one written test.</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Introduction to Digital Electronics
<b>Course code</b>	91198
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Pedro Daniel Frazão Correia
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<ol style="list-style-type: none"> <li>1 To analyse DC electrical circuits using the fundamental laws.</li> <li>2 To know the main characteristics of the semiconductor devices used in analogue and digital electronics.</li> <li>3 To analyse and design basic digital circuits.</li> <li>4 To use development tools to synthesize digital circuits in programmable logic devices.</li> </ol>
<b>Prerequisites</b>	Digital Systems
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1 Circuit Analysis: Definitions and conventions; Unit systems; materials characterization; Kirchhoff laws; Fundamental Theorems of Electrical circuits.</li> <li>2 Semiconductor Devices: diode; bipolar transistor; MOS transistor.</li> <li>3 Digital Electronics: CMOS digital circuits; Bipolar digital circuits; logic families; Memories; Programmable logic devices.</li> <li>4 Descriptive Hardware Languages: Digital systems project using VHDL language.</li> </ol>
<b>Recommended reading</b>	<ol style="list-style-type: none"> <li>1 Jaime Santos, Análise de Circuitos Eléctricos, Minerva, 1997;</li> <li>2 William H. Hayt Jr. , Jack E. Kemmerly, Engineering Circuit Analysis, McGraw Hill, 5ª Edição, 1993;</li> <li>3 Manuel de Medeiros Silva, "Introdução aos Circuitos Eléctricos e Electrónicos", F.C. Gulbenkian, 1996;</li> <li>4 Manuel de Medeiros Silva, "Circuitos com Transístores Bipolares e MOS", F.C. Gulbenkian, 1999;</li> <li>5 Sedra/Smith, Microelectronic Circuits, Oxford University Press, 1998;</li> <li>6 James O. Hamblen, "Rapid Prototyping of Digital Systems", Kluwer Academic Publishers, 2000;</li> <li>7 Peter J. Ashenden, "The Student's Guide to VHDL", Morgan Kaufmann Publishers, 1998;</li> <li>8 Andrew Rushton, "VHDL for Logic Synthesis", John Wiley and Sons, 1998;</li> </ol>
<b>Teaching methods</b>	<ul style="list-style-type: none"> <li>- Lectures;</li> <li>- Problem solving classes;</li> <li>- Laboratory works</li> </ul>
<b>Assessment methods</b>	Exam (70%) (a minimum of 45% required) Laboratory (30%) (a minimum of 45% required)
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Object-Oriented Programming
<b>Course code</b>	91199
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	First
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	António Manso
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<p>1 - Apply the basic principles of problem solving using Object-Oriented programming;</p> <p>2 - Develop functional code through the C++ language, and its class libraries;</p> <p>3 - Manage situations of error and exception in the software development;</p> <p>4 - Develop applications with graphical interfaces directed by events.</p>
<b>Prerequisites</b>	Basic knowledge of programming.
<b>Course contents</b>	<p>1 - Introduction to Object-Oriented Programming</p> <p>2 - Visual programming.</p> <p>3 - Programming with classes.</p> <p>4 - Definition of library classes.</p>
<b>Recommended reading</b>	<p>1 - Texts and other materials available on the e-learning platform:</p> <p>2 - Guerreiro, Pedro João Valente Dias: Programação com Classes em C++, FCA, 2000</p> <p>3 - Stroustrup, Bjarne: The C++ Programming Language, Addison-Wesley, 1997</p> <p>4 - Eckel, Bruce: Thinking in C++ , 2003</p>
<b>Teaching methods</b>	<p>1 - Lectures focusing on content presentation.</p> <p>2 - Practical classes for problem solving and consolidation of knowledge using the computer.</p> <p>3 - Individual guidance of students during project execution.</p>
<b>Assessment methods</b>	Practical assignments and “closed book” examination.
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Internet Technology I
<b>Course code</b>	911910
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	I
<b>Year of study</b>	First
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	José Ramos
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To use client-side programming techniques in order to produce dynamic Web contents, respecting recent standards and recommendations of the W3C Consortium, including: XHTML (Extensible HyperText Markup Language), CSS Language (Cascading Style Sheets), Hypermedia DOM (Document Object Model) and JavaScript Language.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>XHTML (Extensible HyperText Markup Language) e DHTML (Dynamic HyperText Markup Language): W3C standards, syntax, structure and practice;</p> <p>CSS (Cascading Style Sheets) fundamentals: external style sheets, embedded style and inline styles; CSS styling practice: box model, colour schemes, class and object modelling, block metrics;</p> <p>DOM (Document Object Model): class hierarchy, specification levels; properties and methods;</p> <p>JavaScript programming: syntax, dynamic interfaces, forms validating, object motion, event triggered actions, form validation, development of Web interfaces applications;</p>
<b>Recommended reading</b>	Digital resources supplied by the lecturer and content reference Websites: <a href="http://www.w3schools.com">www.w3schools.com</a> and <a href="http://www.devguru.org">www.devguru.org</a> ;
<b>Teaching methods</b>	Presentation of theoretical topics and practices and development of practical works
<b>Assessment methods</b>	Practical works assessment
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Probability and Statistics
<b>Course code</b>	911911
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Second
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Luís Miguel Grilo
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To provide students with solid foundations of some of the main techniques and methodologies of Statistics, so that they develop analysis and reasoning skills that allow them to design and implement solutions to various problems. To provide the tools that facilitate decision-making.
<b>Prerequisites</b>	Fair knowledge of Mathematical Analysis and Linear Algebra.
<b>Course contents</b>	<ul style="list-style-type: none"> <li>1 - Elements of probability.</li> <li>2 - Random variables. Some probability distributions.</li> <li>3 - Sampling and sample distributions.</li> <li>4 - Estimation of parameters.</li> <li>5 - Tests of hypotheses.</li> <li>6 - Correlation and simple linear regression.</li> </ul>
<b>Recommended reading</b>	<p>Support material available on the course website.</p> <p>Guimarães, Rui C. e Cabral, José A. S. (2007). <i>Estatística</i>. 2.<sup>a</sup> Edição, McGraw-Hill.</p> <p>Pedrosa, A. C. e Gama, S. M. A. (2004). <i>Introdução Computacional à Probabilidade e Estatística</i>. Porto Editora.</p>
<b>Teaching methods</b>	Theoretical classes describing and exemplifying the concepts and methods taught. Theoretical-practical classes involving exercise solving. Laboratory and tutorial classes making use of statistical data processing software.
<b>Assessment methods</b>	<p>Continuous assessment: two written tests</p> <p>Final assessment: examination on regular exam periods.</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Data Structures and Algorithms
<b>Course code</b>	911912
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Second
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	António Manso
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<p>1 - Describe the most common data structures and algorithms, as well as its advantages, limitations and application;</p> <p>2 - Apply data structures in the resolution of concrete problems;</p> <p>3 - Design, develop, and test programs for the resolution of medium and big problems.</p>
<b>Prerequisites</b>	Object-oriented programming.
<b>Course contents</b>	<p>1 - Introduction to Java language</p> <p>2 - Algorithm development techniques</p> <p>3 - Algorithms complexity analysis</p> <p>4 - Sorting algorithms.</p> <p>5 - Linear data structures</p> <p>6 - Hierarchical data structures</p> <p>7- Graphs</p>
<b>Recommended reading</b>	<p>1 -Texts and other materials available on the course e-learning platform.</p> <p>2 - Weiss, Mark Allen - Data Structures and Algorithm Analysis in Java Addison Wesley .</p> <p>3 - Bruno R. Preiss - Data Structures and Algorithms with Object-Oriented Design Patterns in Java .</p>
<b>Teaching methods</b>	<p>1- Theoretical classes including content presentation.</p> <p>2 - Practical classes including problem solving and consolidation of knowledge using the computer.</p> <p>3 - Individual guidance of students on project execution.</p>
<b>Assessment methods</b>	Practical works and “closed book” examination.
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Introduction to Telecommunications
<b>Course code</b>	911913
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Second
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Pedro Correia
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	1- To understand the frequency analysis of continuous signals using Fourier Transform;2- To understand the fundamentals of analogue-to-digital conversion; 3- To understand the physical impairments of transmission systems;4- To characterise the different transmission media;5- To understand modulation systems with continuous carrier applied to analogue and digital transmission.
<b>Prerequisites</b>	Mathematical Analysis.
<b>Course contents</b>	1-Introduction to telecommunications 2-Signals and Systems 3- Sampling and Pulse-Code Modulation 4-Transmission media 5- Analogue modulation with continuous carrier 6- Digital data transmission principles
<b>Recommended reading</b>	1- “ Modern Digital and Analog Communication Systems”, B. P. Lathi, Oxford University Press, 1998; 2- “Signal Processing and Linear Systems, B. P. Lathi – Oxford University Press,1998; 3- “Data and Computer Communications”, William Stallings, Seventh Edition, Pearson Education International;
<b>Teaching methods</b>	- Lectures; - Problem solving classes; - Laboratory classes including two components: simulation works using MATLAB/SIMULINK and cable testing.
<b>Assessment methods</b>	Exam (70%) (a minimum of 45% required) Laboratory (30%) (a minimum of 45% required)
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Computer Architecture I
<b>Course code</b>	911914
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	I
<b>Year of study</b>	Second
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Carlos David Queiroz
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<p>To understand the general principles of Computer Architecture, its Internal Organization and the implications of the diverse components on its performance and functioning;</p> <p>To understand the impact of the Assembler Instructions on the different components of a Computer;</p> <p>To describe the different memory levels and information transfer forms between the various peripherals;</p> <p>To develop routines in Assembler Language with different passing parameters methods.</p>
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>1 - General knowledge of Computer Architecture;</p> <p>2 - Organization of the Central Processing Unit - CPU (Units of Data processing; Control units; Forms of Implementation; Performance Analysis);</p> <p>3 - Assembler Language (To develop Routines);</p> <p>4 - Memory Organization (Technologies; Hierarchy and Cache);</p> <p>5- Organization of Interfaces and Peripherals (Types; Characteristics; Interfaces).</p>
<b>Recommended reading</b>	<p><i>Tecnologia dos Equipamentos Informáticos</i>, Rui Vasco Monteiro e outros, FCA Março 2004</p> <p><i>Computer Organization and Architecture 5th Edition</i>, William Stallings, Prentice Hall 1999</p> <p><i>The Intel Microprocessors – Architecture, Programming and Interfacing 6th Edition</i>, Barry B. Brey, Prentice Hall - Pearson Education International 2003</p> <p><i>Computer Systems – Organization &amp; Architecture</i>, John D. Carpinelly, Prentice Hall - Pearson Education International 2001</p> <p><i>Computer Science – An Overview 8th Edition</i>, Brookshear, Prentice Hall - Pearson Education International 2005</p> <p><i>PCI Express – System Architecture</i>, Minishare, Inc., Prentice Hall - Pearson Education International 2004</p> <p><i>Operating Systems</i>, Gary Nutt, Prentice Hall - Pearson Education International 2004</p>
<b>Teaching methods</b>	<p>Lectures with resort to new technologies.</p> <p>Laboratory practical classes.</p>
<b>Assessment methods</b>	Exam (12 points); Practical works (4 points); Laboratory Classes (4 points).
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Databases I
<b>Course code</b>	911915
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	I
<b>Year of study</b>	Second
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Casimiro Batista
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	This course will provide a thorough introduction to the theory and practice of database systems. The emphasis will be on theoretical considerations about modelling data and designing easy to use and effective database systems. The students will learn concepts such as Database, Data Structure, Data Models, various approaches to Database design, strengths of the relational model and Normalization.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>1 - Objectives and functions of Database Management Systems (DBMS).</p> <p>2 - Hierarchical model. Network model. Relational model.</p> <p>3 - Relationships. Instances and schemes. Data dictionary. Keys. Primary key, foreign key and indices. Integrity and rules.</p> <p>4 - Functional dependencies and normalization. First normal form (1FN), second normal form (2FN), third normal form (3FN) and Boyce-Codd normal form.</p> <p>5 - Entity-relationship method. Extended E-R.</p> <p>6 - SQL. SQL's DDL commands. SQL's DML commands.</p>
<b>Recommended reading</b>	<p>1 – Texts and other material provided by the course lecturers.</p> <p>2 – C. J. Date - An introduction to database systems”.</p>
<b>Teaching methods</b>	Theoretical classes involving description and exemplification of the study methods. Theoretical-practical classes with application exercises. Laboratory Practice.
<b>Assessment methods</b>	Theory test. Laboratory works/exercises as well as development and presentation of a Project.
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Operating Systems
<b>Course code</b>	911916
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Second
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Luís Almeida
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To provide students with the fundamental understanding of what an operating system is. Students completing this course should be able to understand the function of an operating system as a resource manager and application interface; identify and describe the current operating systems and its components; know how an operating system and its components work and specify and manage an operating system.
<b>Prerequisites</b>	Basic knowledge of programming skills and computer architecture.
<b>Course contents</b>	<p>1- Operating Systems Introduction;</p> <p>2- Operating Systems Nucleus;</p> <p>3- Processes and Threads Management;</p> <p>4- Process Synchronization and Deadlocks;</p> <p>5- Inter-process Communications;</p> <p>6- Memory Mechanisms and Memory Management Algorithms;</p> <p>7- File System;</p> <p>8- Security and Protection;</p> <p>9- Practical content: shell, unix and windows OS programming; Unix and Windows Server system installation and configuration.</p>
<b>Recommended reading</b>	<ul style="list-style-type: none"> <li>- Gary Nutt, Operating Systems: A Modern Perspective, Third Edition, Addison Wesley, 2004</li> <li>- W. Stallings, Operating systems internals and design principles, 5ª edição, Prentice-Hall, 2005.</li> <li>- A. Silberschatz. P. B. Galvin, Operating System Concepts, 6th edition, Addison-Wesley, 2003.</li> </ul>
<b>Teaching methods</b>	<p>Lectures: oral exposition of course content</p> <p>Laboratory sessions: Laboratorial classes with computer experimental procedures</p>
<b>Assessment methods</b>	<p>End of semester closed book examination.</p> <p>The final mark (CF) is the weighted sum between the score obtained in the written exam (CE), the score in the laboratorial exam (CL) and a series of lab assignments and homework (CA), <math>CF=0.4CE+0.3CL+0.3CA</math></p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Computer Data Networks I
<b>Course code</b>	911917
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Second
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Carlos Queiroz
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	To plan LAN and WAN networks with unicast packets IP routing; To plan networks to support services that use communications multicast; To plan and to choose equipment; To materialize and to maintain services.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>1 - Application Layer (Principles of functioning of the network applications; Application layer Protocols: SMTP, DNS, FTP, HTTP);</p> <p>2 - Presentation Layer (Principles of functioning; MIME, SSL, TLS);</p> <p>3 - Session Layer (Principles of functioning; Sockets);</p> <p>4 - Transport Layer (Introduction to the Transport layer Protocols - UDP and TCP; Used mechanisms of the transport layer to prevent the congestion);</p> <p>5 - Network Layer (Virtual Circuits Networks; Packets commutation Networks; Internet Protocol; Routing Protocols unicast intra-domain and Inter-domain; Multicast IP; Routing multicast intra-domain and Inter-domain).</p>
<b>Recommended reading</b>	<p><i>Data Communications and Networking</i>, Behrouz A. Forouzan; 4<sup>a</sup> Edição; McGraw-Hill.</p> <p><i>Computer Networking</i>, Kurose e Ross; 3<sup>a</sup> Edition; Addison Wesley.</p> <p><i>Engenharia de Redes Informáticas</i>, Edmundo Monteiro e Fernando Boavida; FCA.</p> <p><i>Routing in the Internet</i>, Christian Huitema; Prentice Hall.</p> <p>TCP/IP em Redes Microsoft, Paulo Loureiro; FCA.</p>
<b>Teaching methods</b>	Lectures with resort to new technologies. Laboratory practical classes.
<b>Assessment methods</b>	Exam (12 points); Practical works (4 points); Laboratory Classes (4 points).
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Databases II
<b>Course code</b>	911918
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	II
<b>Year of study</b>	Second
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Casimiro Batista, José Casimiro Pereira
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	The students will acquire an understanding of database technology and become familiar with both the development of database applications and the administration of multi-user databases.
<b>Prerequisites</b>	Databases I
<b>Course contents</b>	<p>1 – An introduction to the administration of Database Management Systems.</p> <p>2 – Physical and logical administration of Database Management Systems.</p> <p>3 – Competition and transactions.</p> <p>4 – Security and recovery</p> <p>5 - Query optimization.</p>
<b>Recommended reading</b>	<p>1 – Texts and other material provided by the course lecturers.</p> <p>2 – C. J. Date - "An introduction to database systems".</p> <p>3 – MySQL – "MySQL Manual"</p>
<b>Teaching methods</b>	Theoretical classes where the study methods are described and exemplified. Theoretical-practical classes where application exercises are solved. Laboratory Practice.
<b>Assessment methods</b>	Theory test. Laboratory works/exercises as well as development and presentation of a small Project.
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Microprocessors
<b>Course code</b>	911919
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Second
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Manuel Barros
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	This course is intended as an introductory course to microprocessor and microcontroller-based system design focused on the Intel MCS51, Motorola 69HCXX and PICs from Microchip Technology family of microcontrollers. The analysis and synthesis of microcontroller systems designs are introduced, supported by modern microcontroller development tools.
<b>Prerequisites</b>	NA
<b>Course contents</b>	<p>1 – Introduction to microcontroller (□C) and microprocessor-based (□P) architectures – Importance and historical review.</p> <p>2 – Introduction to the modern microcontroller-based systems architectures including MCS51, 69HCXX and PICs families.</p> <p>3 – Study of memory structures, special registers and I/O ports.</p> <p>4 – C-Programming languages and addressing modes.</p> <p>5 – Study and use of □C interrupt mechanisms.</p> <p>6 – Digital and analogue I/O interfaces, LCD, ADC, motor, keyboards.</p> <p>7 – Study of USART, CAN, I2C, SPI, IR communication controllers.</p> <p>8 – I/O addressing circuits, ports and memory upgrades.</p> <p>9 – Analysis and synthesis microcontroller-based designs.</p>
<b>Recommended reading</b>	<p>Text and support materials are available in the web page of course unit and the Moodle system.</p> <p>4. Sencer Yelralan e Ashutosh Ahluwalia, “<i>Programming and Interfacing the 8051 microcontroller</i>” – Addison Wesley (1995)</p> <p>5. Peatman, J.B., “<i>Design with PIC Microcontrollers</i>”, Prentice Hall</p> <p>6. “<i>MCS-51 Family of Single chip Microcomputers, User’s Manual</i>” – INTEL - <a href="http://www.intel.com">http://www.intel.com</a></p>
<b>Teaching methods</b>	Theoretical classes in which microcontroller-based design methods and techniques will be described and demonstrated. Practical laboratory classes involving exercise solving to apply learned concepts.
<b>Assessment methods</b>	Written test during regular examination period and practical works during the laboratory classes (7 practical works approx.)
<b>Language of instruction</b>	Portuguese.

## B - Description of individual course units

<b>Course title</b>	Internet Technology II
<b>Course code</b>	911920
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	II
<b>Year of study</b>	Second
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	José Ramos; José Casimiro Pereira
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<p>To use client-side and server-side JavaScript and XML programming technologies, regarding to: represent information through the XML-tree; perform XHTML presentations for XML-coded information; develop and manipulate Active-X objects in order to navigate XML-trees;</p> <p>To develop middleware techniques, based on XML technology, on Web interfaces;</p> <p>To develop Web dynamic interfaces to remote databases, using ASP.NET/SQL programming technologies.</p>
<b>Prerequisites</b>	Internet Technology I
<b>Course contents</b>	<p>XML (Extensible Markup Language) fundamentals: standards, syntax and correctness;</p> <p>XSL (Extensible Stylesheet Language): XSLT (XSL Transformations), XSL-FO (XSL Formatting Objects), XPath (XML Path Language);</p> <p>XML-DOM and XML usage: Xlink (XML Linking Language), Xpointer and XInclude; COM (Component Object Model) / ADO (ActiveX Data Objects) / Recordset Objects;</p> <p>ASP.NET (Active Server Pages.NET): WEB interfaces to remote databases; usability fundamentals for developing human-machine interfaces.</p>
<b>Recommended reading</b>	<p>Digital resources supplied by the lecturer and content reference Websites: <a href="http://www.w3schools.com">www.w3schools.com</a>, <a href="http://www.devguru.org">www.devguru.org</a> and <a href="http://www.devguru.org">www.devguru.org</a>;</p> <p>Abreu, L.; <i>ASP.NET 3.5 - Curso completo</i>; FCA, 2008.  Abreu, L.; <i>Ajax com ASP.Net - Curso Completo</i>; FCA, 2007.</p>
<b>Teaching methods</b>	<p>Theoretical classes involving considerations on course content.</p> <p>Execution of practical works.</p>
<b>Assessment methods</b>	Practical works assessment
<b>Language of instruction</b>	Portuguese

## B – Description of individual course units

<b>Course title</b>	Systems Analysis
<b>Course code</b>	911921
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Third
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	José Ramos; José Casimiro Pereira
<b>Objectives of the course</b>	Development of skills for specification/implementation of Information Systems, with UML language and RUP method.
<b>Prerequisites</b>	Knowledge of object-oriented programming
<b>Course contents</b>	<ul style="list-style-type: none"> <li>▪ Specification of systems requirements</li> <li>▪ UML - Unified Modelling Language <ul style="list-style-type: none"> <li>▪ Why specification is important?</li> <li>▪ Introduction to the UML</li> <li>▪ The notation of UML language</li> <li>▪ Study of UML Diagrams</li> </ul> </li> <li>▪ Definition of software tests</li> <li>▪ RUP – Rational Unified Process</li> </ul>
<b>Recommended reading</b>	<ul style="list-style-type: none"> <li>▪ Texts and other material available in the course webpage.</li> <li>▪ Silva, A. and Videira, C.; <i>UML – Metodologias e Ferramentas CASE</i>, 2<sup>a</sup> Ed; 989-615-009-5, Centro Atlântico (2005);</li> <li>▪ Stevens, P.; <i>Using UML: Software Engineering with Objects and Components</i>, 2<sup>nd</sup> Ed; 9780321269676; Addison-Wesley(2006)</li> </ul>
<b>Teaching methods</b>	Oral presentation of course content (UML) in theoretical classes and supervised problem solving in tutorial classes.
<b>Assessment methods</b>	<ul style="list-style-type: none"> <li>▪ Written Test, (40% final mark);</li> <li>▪ Practical Work (60% final mark)</li> </ul>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Computer Data Networks II
<b>Course code</b>	911922
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Third
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Luís Oliveira
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<ul style="list-style-type: none"> <li>▪ Local area network project and design.</li> <li>▪ Selecting appropriate LAN technology.</li> <li>▪ LAN data management and traffic optimization.</li> </ul>
<b>Prerequisites</b>	Data computer networking I
<b>Course contents</b>	<ol style="list-style-type: none"> <li>1. The link layer and local area networks             <ol style="list-style-type: none"> <li>a. <b>Course title</b>	Distributed Systems
<b>Course code</b>	911925
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Third
<b>Semester/trimester</b>	First
<b>Number of credits</b>	6
<b>Name of lecturer</b>	António Manso
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	<p>1 - Provide the students with theoretical and practical knowledge on distributed systems;</p> <p>2- Study the design, implementation and operation of distributed systems</p> <p>3- Program distributed applications</p>
<b>Prerequisites</b>	Object-oriented programming.
<b>Course contents</b>	<p>1 - Introduction to Distributed Systems</p> <p>2 - Concurrent Programming</p> <p>3 - Communication between processes</p> <p>4 - Programming with Sockets</p> <p>5 - Java RMI</p> <p>6 - CORBA</p> <p>7 - Net Remoting</p> <p>8 - Web-Services</p>
<b>Recommended reading</b>	<p>1 - Texts and other materials available on the e-learning platform of the course unit.</p> <p>2 - Weiss, Mark Allen - Data Structures and Algorithm Analysis in Java; Addison Wesley .</p> <p>3 - Tecnologia de Sistemas Distribuídos , José Alves Marques e Paulo Guedes , 1999, FCA Editora de Informática.</p>
<b>Teaching methods</b>	<p>1- Theoretical classes including course content exposition.</p> <p>2 - Distributed Systems: Concepts and Design , George Couloris, Jean Dollimore, Tim Kindberg , Addison-Wesley</p> <p>3 - Individual guidance of students on project execution.</p>
<b>Assessment methods</b>	Practical works and “closed book” examination.
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Entrepreneurship
<b>Course code</b>	911926
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Third
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Carlos Duarte
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	Development of skills to build a business plan, preparing the diagnosis of opportunity, the implementation strategy, the investment project and the implementation plan.
<b>Prerequisites</b>	Basic concepts of management.
<b>Course contents</b>	<p>1-Concepts of entrepreneurship.</p> <p>2-The process of the entrepreneur</p> <p>3-Methodologies for choosing the project.</p> <p>4-Developing a business plan.</p> <p>5-Financing of the project.</p> <p>6-Creating your company.</p> <p>7-Success / business failure.</p>
<b>Recommended reading</b>	<p>1- Costa, Horácio e Ribeiro, Pedro (2004). <i>Criação &amp; Gestão de Microempresas &amp; Pequenos Negócios</i>, Lisboa: Lidel-Edições Técnicas.</p> <p>2- Silva, Fábio Geraldês (2001). <i>Manual do Empreendedor</i>, Lisboa: Bertrand.</p>
<b>Teaching methods</b>	Theoretical-practical classes in which theory is presented and discussed with presentation of case studies that serve as a support for theoretical concepts. The students' Business Plans are carried out in class with the lecturer supervision.
<b>Assessment methods</b>	<p>Presentation and discussion of the Analysis/Opportunity Plan, the Business Plan and the Final Report of the Project.</p> <p>Written Examination.</p>
<b>Language of instruction</b>	Portuguese

## B - Description of individual course units

<b>Course title</b>	Information Systems on Organizations
<b>Course code</b>	911927
<b>Type of course</b>	One-semester course
<b>Level of Course</b>	NA
<b>Year of study</b>	Third
<b>Semester/trimester</b>	Second
<b>Number of credits</b>	6
<b>Name of lecturer</b>	Nuno Madeira
<b>Objectives of the course (preferably expressed in terms of learning outcomes competences)</b>	Understand the difference between Information, Information Systems and Information Technology. Understand the role of Information Systems at the Organizations. Acquire sensibility for organizational aspects involved when we introduce a new information system. Know how to Manage the Information systems in an organization. Know the importance of aligning IT with business. Know IT-related legislation and standards, mainly IT security. Know how to design an IT department within an organization. Know ERP, CRM, SCM packages to be used inside an organization to support the value chain.
<b>Prerequisites</b>	NA
<b>Course contents</b>	IT Systems on Organizations: Value Channel – Processes to be Supported; IT Systems history; Solutions Map; Information Contents and Flow; Market Solutions; IT Department Organization; IT Strategy; IT Security; IT Investments; Risk Analysis; Aligning Cobit, ITIL and Security Standards; Legislation.
<b>Recommended reading</b>	<p><i>Management Information Systems: New Approaches to Organization and Technology</i>; Laudan K. e Laudan J., Prentice Hall 2004, 8<sup>th</sup> edition</p> <p>A arquitectura da gestão dos Sistemas de Informação, João Eduardo Quintela Varajão, FCA Editora</p> <p><i>Gestão de Serviços TI</i>; Ivor Macfarlane Colin Rudd: Edição da itSMF (The IT Service Management Forum) Portugal, Lisboa, Maio 2003</p> <p>Sistemas de Informação: uma abordagem sistémica; Manuel João Pereira; Universidade Católica Editora Unipessoal, Lda; Lisboa 2005</p> <p><i>Método de Auditoria a Sistemas de Informação</i>; José António Oliveira; Porto Editora; Lisboa, Janeiro 2006</p> <p><i>A Arquitectura e Gestão de Sistemas de Informação</i>; João Eduardo Quintela Varajão; FCA, Editora de Informática; Agosto 1998</p> <p><i>Estratégias Empresariais e Tecnologias da Informação</i>; N.
